

20 Dynamic content

Please edit system and help pages
ONLY in the master wiki!

For more information, please see
MoinMoin:MoinDev/Translation.

```
##master-page: ##master-date: #acl -All:write Default #format wiki #language en #pragma  
section-numbers off <<Navigation(slides)>>
```

(!) "The following four chapters are about advanced details. If you don't care about this, you can just `[[../30 The graphical editor|skip]]` them."

= Dynamic content = MoinMoin is built in a quite modular way, so its functions are expandable by using plug-ins. Macros, parsers, actions, etc. can either be built-in, included, or installed as a plug-in.

== Macros == A macro is entered as wiki markup and it processes a few parameters to generate an output, which is displayed in the content area.

== Parsers == A parser is entered as wiki markup and it processes a few parameters and a multiline block of text data to generate an output, which is displayed in the content area.

== Actions == An action is mostly called using the menu (or a macro) and generates a complete HTML page on its own.

##(!) Examples are on the following pages...

Version #1
