

FileAttachments

Please edit system and help pages
ONLY in the master wiki!

For more information, please see
MoinMoin:MoinDev/Translation.

```
##master-page:Unknown-Page ##master-date:Unknown-Date #acl -All:write Default #format wiki  
#language en = File Attachments Configuration =
```

The [[HelpOnActions/AttachFile|AttachFile action]] enables a page to have multiple attached files. Since file uploads could be abused for DoS (Denial of Service) attacks, `AttachFile` is an action that may be disabled by the wiki administrator (by adding `actions_excluded = ['AttachFile']` to `wikiconfig`).

This is all you usually need to do for configuration.

== How attachments are handled ==

Attachments are stored "privately" in the `data/pages/` directory (with paths like `data/pages/<pagename>/attachments/<filename>`) and can only be retrieved by using the `AttachFile` action (via URLs like

```
http://example.org/mywiki/<SomePage>?action=AttachFile&do=get&target=filename.ext
```

).

! The `direct serving method` (deprecated since long) was finally removed in moin 1.7.0. If you have used it until now (`attachments = {...}`), please copy your attachments into your data directory (and make sure they arrive at the right location there).
