

MonthCalendar

Please edit system and help pages
ONLY in the master wiki!

For more information, please see
MoinMoin:MoinDev/Translation.

```
##master-page: ##master-date: #acl -All:write Default #format wiki #language en
```

```
= MonthCalendar = <<TableOfContents>>
```

This macro is for those who want to use MoinMoin as a Personal Information Manager and need a calendar wiki integration.

== Usage ==

```
<<MonthCalendar(BasePage,year,month,monthoffset,monthoffset2,height6,anniversary,template)>>
```

```
||<rowbgcolor="#ffffcc"> ""Parameter name"" || ""Possible values"" || ""Default value"" ||  
""Description"" || || !BasePage || Page name || current page || Base page for calendar entry pages. ||  
|| year || Integer number || current year || Year to display on calendar. || || month || 1..12 ||  
current month || Base month using for displaying calendar. See also monthoffset, monthoffset2. || ||  
monthoffset || Integer number || 0 || Offset added to month for displaying. || || monthoffset2 ||  
Integer number || 0 || Offset added to month for navigation links (previous/next month/year). || ||  
height6 || 0 or 1 || 0 || When this parameter set to 1, calendar aligned at height of 6 lines. || ||  
anniversary || 0 or 1 || 0 || Year calendar (no year in page links). || || template || Page name || —  
|| Template page used for calendar event pages creation. ||
```

Each parameter can be empty and then defaults to currentpage or currentdate or monthoffset=0

When an event is entered on a date, that date will be highlighted on the calendar, which you can also mouse over and get a javascript pop-up. To get a summary in that pop-up, put the summary in a heading 1 case, like {{{= Big Birthday Today! =}}}

== Examples == === Show Single Month === The simplest version looks like this:

```
||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar>> || <<MonthCalendar>> ||<style="border:none; width:99%"> || |||||<style="border:none; text-align:left"> <<BR>>The previous month's calendar for page "!OtherUser" looks like that: || ||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(OtherUser,, -1)>> || <<MonthCalendar(OtherUser,,, -1)>> ||<style="border:none; width:99%"> || |||||<style="border:none; text-align:left"> <<BR>>Calendar of Page !SampleUser, this year's December: || ||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(SampleUser,, 12)>> || <<MonthCalendar(SampleUser,, 12)>> ||<style="border:none; width:99%"> || |||||<style="border:none; text-align:left"> <<BR>>Calendar of current Page, this year's December: || ||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(, , 12)>> || <<MonthCalendar(, , 12)>> ||<style="border:none; width:99%"> || |||||<style="border:none; text-align:left"> <<BR>>Calendar of December, 2001: || ||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(, , 2001, 12)>> || <<MonthCalendar(, , 2001, 12)>> ||<style="border:none; width:99%"> || |||||<style="border:none; text-align:left"> <<BR>>Calendar of the month two months after December, 2001 (maybe doesn't make much sense, but is possible) || ||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(, , 2001, 12, +2)>> || <<MonthCalendar(, , 2001, 12, +2)>> ||<style="border:none; width:99%"> ||
```

=== Entire Year Calendar === Calendar of year 2002 (every month padded to height of 6):

```
==== Markup ==== { { { |||||<bgcolor="#ffffcc"> ""Year 2002"" || || <<MonthCalendar(, 2002, 1, , 1)>> || <<MonthCalendar(, 2002, 2, , 1)>> || <<MonthCalendar(, 2002, 3, , 1)>> || || <<MonthCalendar(, 2002, 4, , 1)>> || <<MonthCalendar(, 2002, 5, , 1)>> || <<MonthCalendar(, 2002, 6, , 1)>> || || <<MonthCalendar(, 2002, 7, , 1)>> || <<MonthCalendar(, 2002, 8, , 1)>> || <<MonthCalendar(, 2002, 9, , 1)>> || || <<MonthCalendar(, 2002, 10, , 1)>> || <<MonthCalendar(, 2002, 11, , 1)>> || <<MonthCalendar(, 2002, 12, , 1)>> || } } }
```

```
==== Result ==== { { { #!wiki dashed |||||<bgcolor="#ffffcc"> ""Year 2002"" || || <<MonthCalendar(, 2002, 1, , 1)>> || <<MonthCalendar(, 2002, 2, , 1)>> || <<MonthCalendar(, 2002, 3, , 1)>> || || <<MonthCalendar(, 2002, 4, , 1)>> || <<MonthCalendar(, 2002, 5, , 1)>> || <<MonthCalendar(, 2002, 6, , 1)>> || || <<MonthCalendar(, 2002, 7, , 1)>> || <<MonthCalendar(, 2002, 8, , 1)>> || <<MonthCalendar(, 2002, 9, , 1)>> || || <<MonthCalendar(, 2002, 10, , 1)>> || <<MonthCalendar(, 2002, 11, , 1)>> || <<MonthCalendar(, 2002, 12, , 1)>> || } } }
```

=== Current Month Calendar === Current calendar of me, also showing entries of A and B:
||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(MyPage*TestUserA*TestUserB)>> || <<MonthCalendar(MyPage TestUserA TestUserB)>> ||<style="border:none; width:99%"> ||

=== SubPage Calendar ===

```
||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(MyName/CalPrivate)>> ||  
<<MonthCalendar(MyName/CalPrivate)>> ||<style="border:none; width:99%"> || ||  
<<MonthCalendar(MyName/CalBusiness)>> || <<MonthCalendar(MyName/CalBusiness)>>  
||<style="border:none; width:99%"> || || <<MonthCalendar(MyName/CalBusiness*MyName/CalPrivate)>> ||  
<<MonthCalendar(MyName/CalBusiness*MyName/CalPrivate)>> ||<style="border:none; width:99%"> ||
```

=== Anniversary Calendar === No year data. ||<bgcolor="#ffffcc"> ""Markup""

```
||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || ||  
<<MonthCalendar(Yearly,,,+1,,1,1)>> || <<MonthCalendar(Yearly,,,+1,,1,1)>>  
||<style="border:none; width:99%"> ||
```

=== Using a Template === This creates calendars of the format Yearly/MM-DD. By leaving out the year, you can set birthdays, and anniversaries in this calendar and not have to re-enter each year.

This creates a calendar which uses !MonthCalendarTemplate for directly editing nonexisting day pages: ||<bgcolor="#ffffcc"> ""Markup"" ||<bgcolor="#ffffcc"> ""Result"" ||<style="border:none; width:99%"> || || <<MonthCalendar(,,,,,MonthCalendarTemplate)>> ||
<<MonthCalendar(,,,,,MonthCalendarTemplate)>> ||<style="border:none; width:99%"> ||
